

INDIGO SCAPE INTERNET MANAGEMENT SECURITY SOFTWARE SYSTEMS

Manage and Monitor Internet Use, Restrict Access, Filter Websites and Content with Indigo Scape

Surfing the Internet has become a favourite pastime of people of all ages. The Internet can also be a source of real time information, news and entertainment.

Most businesses are generally resigned to the fact that employees are sometimes using company resources during business hours for personal use. Social networking sites like Facebook, MySpace and Twitter are regularly accessed during work hours. There is a huge risk of misuse, abuse and productivity loss with these sites.

The Internet can expose people including minors to gambling, drug abuse, pornography, hate literature and violence. Statistics from various respected sources indicate a critical need for Internet Management and Control measures.

Browsing Statistics

International Data Corporation estimated that 30% to 40% of employee Internet use isn't work related. Nielsen/NetRatings reported 92% of online stock trading occurs from the workplace during work hours and 46% of online holiday shopping takes place at work. Another shocking statistic from SexTracker states that 70% of all Web traffic to Internet pornography sites occurs between 9 am and 5 pm.

In the United States, real cost loss estimates range from 1.75 billion to well over 2.5 billion a year. Communication managers must have a handle on Internet usage practices in order to gauge bandwidth needs, monitor and control browsing activity and secure their business intelligence. Educational institutions, government agencies and general business can derive huge benefits from measuring and policing Internet usage.

- **30% to 40% of employee Internet use isn't work related.**
- **Malicious computer use and Internet misconduct costs businesses billions every year.**
- **Over 60% of businesses have no internal security policy regarding the use of computers.**
- **Anti virus software and firewalls will not protect computer systems from malicious users and employees.**
- **Internet access is enemy number one for software piracy.**
- **A quarter of companies have dismissed employees for Internet misconduct.**
- **Adopting new security software can only change the future.**

Overall there is a distinct lack of awareness of the importance of computer security. If your computer systems have only the usual virus protection and/or a firewall then your systems are at risk from internal abuse and misuse.

Think about what security measures you are taking to protect your organization from malicious users and employees at the workstation level!

'SECURITY SOFTWARE IS THE MOST IMPORTANT INVESTMENT YOU CAN MAKE IN PROTECTING YOUR BUSINESS'

Our security software is designed to protect public and private industry, small business and home users. It will save costs and safeguard computers by providing effective user and security management for Internet access.

- **Safeguards your business and protects your interests.**
- **Prevent Internet misuse and abuse.**
- **Huge cost and time savings in both the long and short term.**
- **Protects against malicious users and/or employees.**
- **System stabilization and reduced maintenance costs.**

Investment in our security software is guaranteed to reduce costs, safeguard your computer systems and actively protect your business.
